SERVICE PROGRAMME FOR SAE USERS

SAE SPARK EROSION MACHINES

Dear Sir/Madam

Spark erosion machines that are constantly in use need to be checked regularly for their functioning and operational safety even if the machines are described as "maintenance-free".

Sometimes it is just the settings that have changed or machine parts and filters that have not been replaced which can influence the optimal use and, thus, the end result of the workpiece. The best user will prefer to consult the specialist in order to be certain that he can work reliably with the machine.

At the request of many SAE users we provide a service check which can almost certainly help avoid expensive repairs further down the line. In addition, Mr Kunz can provide, if required, instructions on the machine.

- Service Offer:**
1. Standard machine check
 2. Filter change
 3. Practical machine instructions on-site

Standard service package
Price upon request

SAE SERVICE PACKAGE

We offer: 3 machine modules are checked thoroughly for known and established faults

A	FUNCTIONAL PART	B	PUMP	C	GENERATOR
-	Depth adjustment, possibly adjust	-	Filter change	-	Cleaning electronics
-	Raise dielectric fluid (flush)	-	Pump pressure	-	Switch functions
-	Axial play on the spindle sleeve	-	Impermeability	-	Test erosion
-	Control unit - electronics	-	Pump head	-	Performance check
		-	Dielectric fluid hoses	-	Test run

If your spark erosion machine is due for a service, please return the enclosed reply form.

Talk with the technician and tips for the user. At least two working hours are planned as standard.

Necessary material and spare parts will be charged in addition to the work that that has been requested.

Yours sincerely
